

456

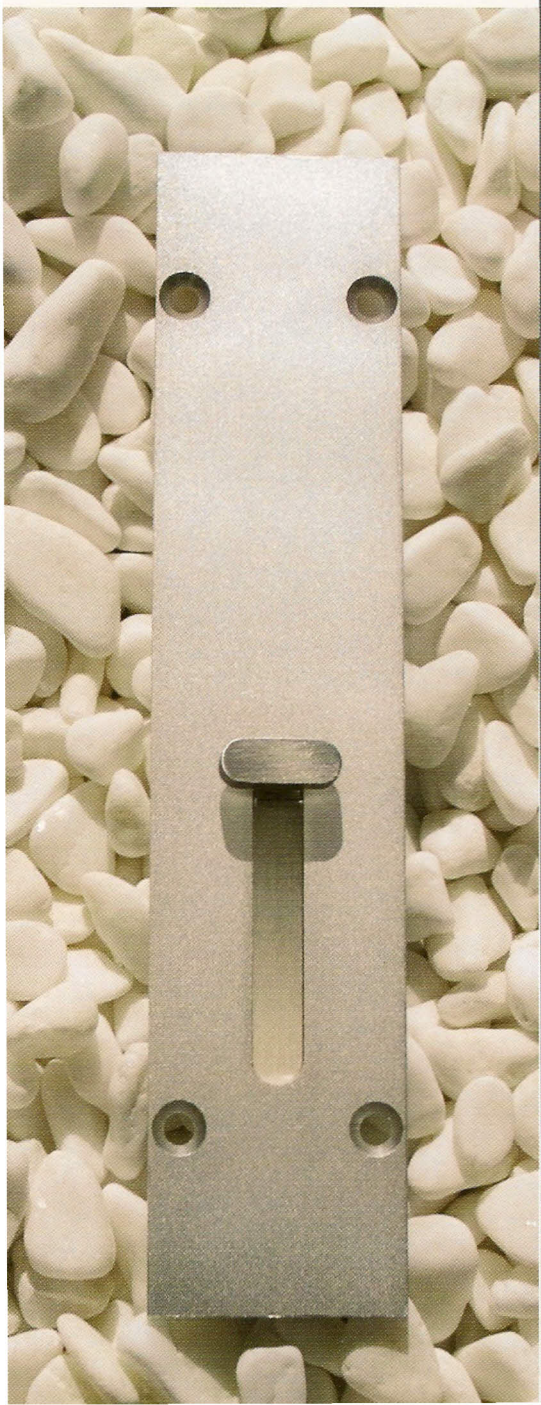

With many years of active service, the Henderson 456 flush bolt combines proven performance with the latest design improvements.

Well-suited to traditional joinery style, the 456 features a square-cut top - a classical look from the bygone age before power tools and routing machines.

Available in three lengths: 190mm, 450mm and 600mm, to suit doors up to and above 3 metres tall.

The body of the 456 is made from extruded brass, and is the ideal material to apply the three finishes available. Satin nickel, polished nickel, or titanium gold. Titanium gold is a finish that looks like classic laquered brass but offers corrosion resistance and an easy care finish similar to that of stainless steel.

With such flexibility, the 456 can be featured throughout the property and made as discrete or as striking as desired.

Modern Classic

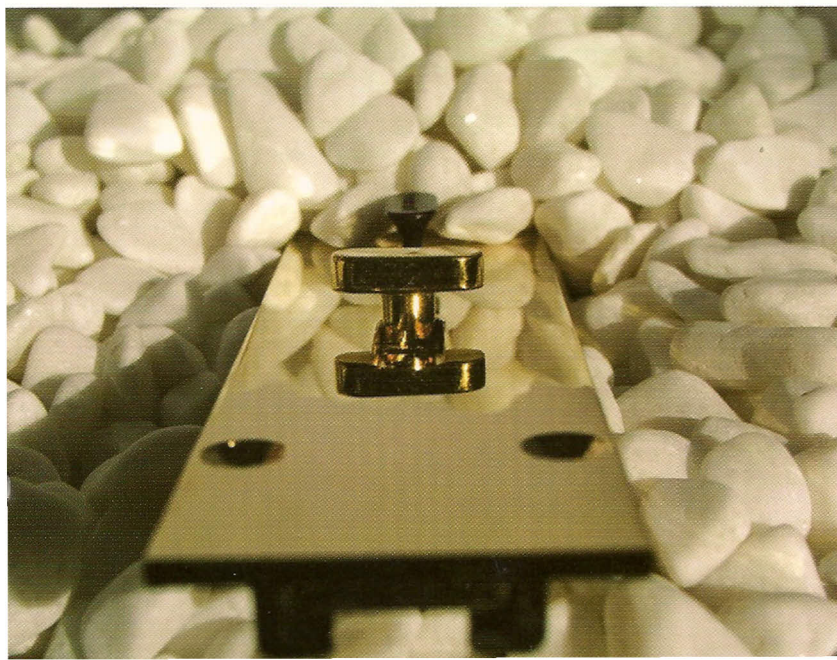

456R

The 456R is a variation of the original 456, utilising the same proven technology with the addition of a round-cut top.

Ideally suited to modern machining operations, the rebate can be machined in a single router operation, saving valuable installation time.

Specially designed to be used on folding door systems, low-profile in design, the key can be left in situ without risk of damage to adjacent stiles.

As with the 456, the 456R is available in satin nickel, polished nickel or titanium gold. With this range of finishes and sleek contemporary design, the 456R is the flush bolt to suit virtually any interior.

360

Developed specifically for timber windows, the 360 is a brass-bodied design that incorporates all the features of the larger 456 flush bolt.

At just 110mm x 24mm in size, and only 9mm thick, the 360 is ideally suited to smaller stiles of modern window designs. A 300mm long version is available for those hard to reach window applications.

In round-top only, the 360 is simple to install, fitted to the sash by just 2 screws

that pass through the centre of the body and shoot bolt. As with all Henderson flush bolts, a dedicated router is available to ensure an exact fit.

With the same range of finishes as the 456 and locking options, the 360 offers complete flexibility and long-term performance.

In addition, the innovative 360RK Round Shoot Bolt Retainer has been specifically designed to stylishly finish off Weatherfold Window Servery 20 applications that allow flush bolts to lock into granite benchtops.
